

OUR EXPERTISE YOUR INNOVATION

LENCON ENGINEERING

“Engineering expertise that turns complex technical challenges into reliable solutions.”

About us

Lencon Engineering is a multidisciplinary engineering partner driven by technical excellence and practical innovation. Based in the Netherlands, we combine hands-on expertise with a strong focus on quality, collaboration, and long-term partnerships.

Our experienced engineers bring a pragmatic and results-driven mindset to every assignment. We value clear communication, flexibility, and a deep understanding of technical and organizational challenges. By connecting creativity with manufacturability, we transform ideas into robust, high-quality products that perform reliably in demanding environments and deliver sustainable value.

Solutions

Lencon Engineering delivers integrated solutions for organizations requiring additional engineering capacity and dependable execution. Our services include engineering support on location, project engineering from concept to realization, and prototyping & industrialization. By combining these disciplines, we resolve complex technical challenges and deliver manufacturable, reliable products ready for series production.

Company highlights/ Milestones

Over 25 years of engineering expertise demonstrated in technically demanding projects. Milestones include contributing to the Deltares Deltagoot wave generator and performing advanced structural and frequency response analyses for Moog's modular flight simulator platform. Experience ranges from large-scale dynamic systems to precision measurement solutions under extreme conditions.

Company facts

- Founded in 1998, headquartered in the Netherlands
- Team of 25 mechanical and industrial engineers (HBO/TU level)
- Active in defence, aerospace, high-tech, healthcare, and agri-horti
- Strong analytical and structural engineering expertise
