

STARION NEDERLAND B.V.

“Specialist in system engineering for space, defence and critical infrastructures.”

About us

Starion provides engineering expertise and solutions for space, defence and other critical infrastructures across Europe, pushing the boundaries of innovation. We offer over 30 years of expertise and investment in the space sector, developing and operating systems and solutions tailored to our clients' needs. By combining space and system engineering with established and emerging technologies, such as AI and quantum, we also produce innovative solutions that make a fundamental difference for our clients and for society. Starion is also a pioneer in the field of cybersecurity for space assets, working closely with major space organisations and SMEs to offer security by design across the entire mission operations value chain.

Solutions

Starion experts work across the complete space mission lifecycle, from spacecraft design, mission operations and data collection to decommissioning at the end of a satellite's life, data archiving and utilisation. Our innovative, cutting-edge approach in system development and engineering services, and our reputation as a trusted partner, are why we are repeatedly chosen to lead and collaborate in projects and programmes that push boundaries and make a difference to both public and private organisations.

Company highlights

Starion's flagship products CDP4-COMET is the leading concurrent design platform used in the early stages of projects involving multiple engineering and business disciplines.

Starion recently won two important civil security from space projects; the development of a European RF Spectrum Monitoring Service (ESMS), and Safety Platform Crisis and Emergency (SAFEPLACE) project.

Company facts

- Founded in 1992
- 800+ employees
- 11 offices across 8 countries
- Core competencies in entire space value chain
- Delivery capability at all stages of life cycle
- Pioneers in cybersecurity for space assets
- Integrate emerging technologies such as AI into spacecraft
