

S[&]T

“Space for a Safer Life.”

s[&]t

About us

At **S[&]T**, we are committed to creating a safer life on Earth by transforming space data into valuable and actionable insights. We manage data throughout the entire process, from instrument to application. We apply our expertise within our software frameworks, information products, and consultancy.

With over two decades of expertise in instrument calibration, data quality monitoring tools, real-time data processing frameworks, and the development of application-specific algorithms, we empower organisations, governments, and industries to strengthen their information position and enhance decision-making.

Solutions

We control all levels of the data value chain from data source to user applications. We specialize in:

- Scientific (on-board) data processing for Earth Observation (multispectral, hyperspectral, radar, atmospheric data etc).
- Scientific (Cloud) Computing of extremely large datasets.
- Advanced data analytics (machine learning, anomaly detection, semantic processing etc.).
- Software development for radio astronomy applications.

Company highlights

We have created many solutions, a few of which are:

- Several software tools to process the data of Sentinel and Earth Explorer missions.
- High-performance platforms for use of Earth Observation data to improve decision-making.
- Robust PNT by using advanced antenna technology and jamming and spoofing detection.
- A warning system for disturbances caused by solar radio bursts.

Company facts

- Founded in 2000.
- S[&]T has grown to a diverse group of 150 professionals.
- 90% hold a BSc, MSc or PhD in Computer Science, Physics, Aerospace or Electrical Engineering, Mathematics or Astronomy.
- We execute projects (from €50k to €5M) as a prime or subcontractor.
- Our headquarter is in Delft, The Netherlands, with offices in Oslo and Rome.
