

VON STORCH ENGINEERING

“Ground Station & Tracking Solutions for the Aerospace Sector.”

About us

Von Storch Engineering specializes in Ground Station & Tracking solutions for the Aerospace Sector. We focus on providing our customers with high-quality connectivity through customized and personalized services. Our Ground Station services provide reliable radio frequency (RF) communication links in various frequency bands from Spacecraft, Launch Vehicles and Aircraft.

Our Tracking & Identification services keep track of our customers' spacecraft and allow communications to be established and maintained directly after launch. Whether you are looking for short- or long-term support, with our experience, dedication and flexibility we are your partner to help make your mission a success.

Solutions

Our Ground Station services allow our customers to communicate with their Spacecraft/Launch Vehicle/Aircraft using our infrastructure. We can provide additional coverage to customers who already own a ground station, or connect customers who do not own a ground station.

Our Tracking & Identification services keep track of customers' spacecraft after launch, significantly reducing the risk of not establishing or losing contact. We can also support Space Domain Awareness and help locate and (re-)establish communication with lost spacecraft.

Company highlights

- Successfully provided Ground Station, Tracking & Identification support for spacecraft of various sizes, ranging from larger satellites to pico satellites.
- Supported well-known commercial spacecraft operators, government space agency missions and renowned academic institutions.
- Tracked several lunar and deep space missions (including capture of high-accuracy radiometric RF recordings).

Company facts

- Founded in 2021
- We own and operate a number of ground stations, capable of supporting a variety of frequency bands
- VHF, UHF, L-, S-, C-Band (X-Band in progress)
- Support for LEO/MEO/GEO/HEO and Lunar/Deep Space missions
- Located in Delft, The Netherlands
