

TRIOPSYS

“Your Mission Critical systems, Our Mission 24/7”

About us

TriOpSys is an experienced Dutch IT systems integrator with its core focus in the field of Mission Critical Systems. Since 2002, TriOpSys has been working closely with a number of Dutch institutes and companies in the space industry. We support these organizations by providing our IT expertise and we hold extensive knowledge and experience in areas as such as satellite data processing, simulators, hard- & software integration and (functional & technical) requirements engineering. In this industry, reliable and strong data processing systems are vital. Throughout the years, TriOpSys has established itself well in the area of both scientific data processing as well as data processing on instruments and calibrations.

Solutions

- **Satellite Data Processing:** TriOpSys has a track-record in the development of operational satellite (L01b) data processing software for earth observation missions (OMI, TROPOMI, S5, CO2M).
- **Data processing frameworks, Archives & Portals:** we develop software systems to collect, analyze, process, distribute large data from Space borne instruments and ground-based sensor networks.
- **Consultancy:** TriOpSys can provide consultancy and advice with regard to requirements gathering, analysis and engineering activities.

Company highlights

- TriOpSys developed the L01b dataprocessing software for the renown TROPOMI satellite instrument.
- In 2023, TriOpSys won the NLJUG Innovation Award for its innovative project “Decision Support Tool” for the Dutch Air Traffic Control (LVNL).

Company facts

- TriOpSys, located in Utrecht, was founded in 1998 with a passion for Mission Critical IT and is now part of the ICT Group.
- TriOpSys (with its 140 staff) offers a wide palette of skills, technologies and experts: analysts, architects, software developers, testers, projectmanagers, IT infra- and security experts & a Mission Critical helpdesk.
